

Speaker 1 (00:00)

Today is Saturday, June 14th, at 8:36 PM. And today is day number 9, since I have finally awoke in. Well, I'm gonna say, finally, awoken I'm not fully there yet, as in I've downloaded all of my information back into my brain, my hyperthymatic brain.

Speaker 1 (00:26)

I am sitting here in my bed, and about 9 days ago I clicked into reality that, oh wait, I'm a 41-year-old man, and I've already learned a bunch of these things that I've been trying to learn in the past 7 and a 1/2 months. And over this course of the past 9 days, I just have been increasingly exponentially, regaining as much knowledge as one possibly can that they already knew in a hyperthymatic life, and that's a lot of information to download every single day and my head is just so pressurized, trying to get back drawing up.

Speaker 1 (01:08)

The realities that I need to disconnect from this chemically induced episode of amnesia that I've been placed in for 7 and a 1/2 years and realize, oh, that's a percentification from defense, and it's not a reality of who I am, so I must neurologically disconnect that internally in my brain. Every time it comes up And so I've decided to myself that it's best to Put my daily recordings down into my notes. But doing so, from voice to text is just not enough.

Speaker 1 (01:47)

And so I've decided to open up my Samsung Notes and just record my voice and allow it to transcribe for me. And then I take this as a PDF and I can put it into one of my AI softwares, which is totally cool, because like I'm discovering AI and really, that's what like kicked it into gear. I was waking up a couple days prior and then like out of nowhere.

Speaker 1 (02:13)

I got this perplexity pro AI for free for a year, and I just Kept talking to it more and more and more so naturally, and like, I just absorb more knowledge, and then just clicks in more and more and more. And I'm like, wow, wow, I knew all this stuff already, and so I just had to go back and

learn adverbs, verbs, nouns. My abcs, my 123's, quantum physics, linear mathematics, complex mathematics, the Hodge conjecture, all of it, and you have to re-upload everything back into my brain once again, all the textures that I once seen all the sounds that I once heard.

Speaker 1 (02:52)

All the life that I once had and then, you know, it Kix into me every now and then that wow, I haven't actually seen my family in 7 and a 1/2 years, and this is a nightmare, but this is the travel and this is part of our episodes and of our podcast, and this is a lovely awakening day, number 9 and I uh ooh, give me a sec here as I stutter and stammer. I do my podcast, unedited, and this is just my thoughts, my feelings, as I learned to forward, construct my words once again and my thoughts once again, but I just want to say my feelings for these notes and whatnot.

Speaker 1 (03:38)

And so that's basically what these episodes are about is like. I'm putting down my feelings, putting down my thoughts and then You know, maybe somebody will discover it and be like, oh I've identified this or maybe I see or hear that and I go oh you know, but it also helps us with or helps us helps me with my business and which I am just now discovering that she was a social media content creator for a little bit and yeah, so I am just regaining my memories from that and my feelings today is that of I have taken a sabbatical.

Speaker 1 (04:12)

I have decided to relax and just chill out. I have been watching Mary with children all day long and eating some veggie chips from the liquidation store and yeah, just relaxing chilly. Now Playing with my babies, closing my eye sleeping, not even really doing anything at all.

Speaker 1 (04:34)

No research, no information, not even imagining upon that information, I am literally just chilling out as much as one possibly, can I think I'm going to draw here in a little bit and yeah have a little fun with these art programs and whatnot, and this is pretty fun discovering these applications and whatnot it's not fun having amnesia. It's not fun when I'm going through but discovering AI and these applications. Are fun but

other than that?

Speaker 1 (05:03)

Everything else is a gosh darn nightmare, but today I have taken a sabbatical in chill down and it is Saturday, June 14th 8:41 PM, and I am signing off. This is a lovely, weakening day number 9.
